Thanks Lorenzo

And just as a reminder, we can put together the grant pretty quick but due to COVID and holidays around the corner, we will need good amount of time for administrative docs. So if everyone is on board, I would really appreciate if you can set up an in person meeting at the earliest with the major city officials and stakeholders like last time and we can go over all the logistics. Let me know if this will work with you and others.

Hi Lorenzo

Thanks for sharing the information. This is exciting as we already have all the necessary tools and background information along with the team in place who can put together a comprehensive watershed- based plan to benefit the struggling communities. Please let me know how you would like to proceed, and we can start looking into the logistics.

Regards

Hello Rochelle, Ajay,

I received an email from the Mayor on Friday concerning a IL EPA Grant. Is this a part of the work result of the Collaborative Team?

Thanks and Stay Safe,
Lorenzo Thompson

Subject: RE: Illinois EPA Announces Grant Opportunity to Benefit Centreville, Alorton, and East St. Louis through Stormwater Runoff Control Planning and Project Implementation

Good Morning Ms. Brooke, Mayor Eastern,

I believe the City is engaged in a watershed-based plan. The plan is geared towards Best Management Practices as it related to water quality. Ms. Marceillars and Dr. Kalra have submitted an application in the City's behalf. I believe the other two communities are involved, as well.

If Ms. Marceillars and Dr. Kalra are not a part of the Illinois EPA application process, I believe they are valuable assets in drafting this Grant. The City can identify problem areas through history and existing conditions.

Please keep in mind that Applicants may not apply for a grant until they are pre-qualified through the Grant Accountability and Transparency Act (GATA) Grantee Portal.

Should I contact Ms. Marceillars concerning this?

Thanks and Stay Safe,
Lorenzo Thompson

Illinois EPA Announces Grant Opportunity to Benefit Centreville, Alorton, and East St. Louis through Stormwater Runoff Control Planning and Project Implementation

Prairie du Pont Watershed Notice of Funding Opportunity Now Accepting Applications

SPRINGFIELD — Illinois Environmental Protection Agency Director John J. Kim today announced the Prairie du Pont Watershed grant opportunity with up to \$1 million in funding to develop a community-endorsed watershed-based plan and voluntarily implemented projects designed to reduce stormwater runoff and fix minor sewer system infrastructure issues within the project area. A Notice of Funding Opportunity has been posted. Applicants are required to pre-qualify through the Grant Accountability and Transparency Act Grantee Portal.

“Illinois EPA is pleased to offer this initial funding opportunity to help provide some relief to residents in the Centreville, Alorton, and East St. Louis area. The complex network of wastewater system and flooding issues in this region require a focused approach and financial and technical resources from a number of different regulatory agencies,” said Illinois EPA Director John Kim. “Our staff has been engaged in productive discussions with local residents, community groups, advocacy organizations, and elected officials to identify short and long-term steps to reduce the stress on the existing sewage collective system and improve local surface and groundwater quality. The Pritzker Administration is committed to continuing to work with all stakeholders to address these longstanding issues.”

The communities of Centreville, Alorton, and East St. Louis currently experience significant flooding and sewage backups. These problems are caused by a combination of natural causes, human development activities, and the operation and maintenance of an older sewer system. A plan is needed to help identify best management practices to improve stormwater runoff controls appropriate for the watershed. Such measures will seek to reduce the number and duration of flood events and to help provide long-term relief to the existing sewer collection system.

The Prairie du Pont project will engage local stakeholders (including residents) to develop the plan while implementing best management practices and making needed sewer system infrastructure repairs. These projects will help the watershed planning committee and local homeowners understand how these practices work and help them identify which types of practices need to be included in the final watershed-based plan.

The Agency is seeking project proposals from applicants that have experience in the successful development of an Illinois EPA approved watershed-based plan and also have coordinated the implementation of best management practices.

Applications for the Prairie du Pont NOFO are due by close of business (5:00 p.m.) on Thursday, December 10, 2020. For more information, visit: <https://www2.illinois.gov/epa/topics/forms/water-forms/Pages/financial-assistance.aspx>.

Applicants may not apply for a grant until they are pre-qualified through the [Grant Accountability and Transparency Act \(GATA\) Grantee Portal](#).
